

CryptoDo - multichain no-code web3 solutions builder for businesses

cryptodo.app

What is CryptoDo

CryptoDo is a multichain no-code platform for creating web3 applications based on blockchain. We help companies and web2 projects improve their business models by introducing smart contracts into business processes.

CryptoDo enables anyone to launch their own smart contract in as little as 5 minutes, in compliance with international standards and without the need for any programming skills or a resource base.

Pre-launch traction of CryptoDo

- During the public beta version of CryptoDo, users have created over 3000 diverse web3 applications across all supported blockchains
- We have built a strong community on CryptoDo social media, with over 30,000 followers
- We won one of the largest blockchain hackathons hosted by ChainLink, received grants, and built partnerships with major blockchain ecosystems such as Mantle (BitDAO), Aurora, OKX Chain, Bitgert, 5ire, and others

Why do businesses need blockchain solutions?

Trust between counterparties

In an environment where there is no trust between counterparties, trust is provided by mathematics

Business process efficiency

Ample opportunities for automation, systematization and control

Exclusion of intermediaries

Decentralization and self-executing smart contracts give rise to new business models

Problems of integrating web3 solutions into business

Web3 development is expensive

Blockchain recruitment challenges

High security risks of DIY smart contracts

Advantages **CryptoDo**

Simplicity

In CryptoDo anyone can create their own smart contract in a few minutes without any coding skills

Security

CryptoDo users get a ready-made secure solution "out of the box". All the designer's contracts pass the best audits

Low cost

CryptoDo is a SaaS product with a minimum web3 applications production costs, so we offer the best price on the market

Examples of scenarios for using blockchain solutions in real business

DAO City Farmers

DAO technology is used to bring together enthusiastic investors and consumers of healthy food around the world. CryptoDo modules for business allow you to automate the management of the creation and implementation of the final product

NFT tickets

NFT is a non-fungible token in the blockchain. This property allows you to find many applications of NFT as objects of actor's rights - tickets for events. The CryptoDo module for ticket sales allows you to integrate this functionality in 2 clicks

Blockchain in Logistics and commerce

The use of smart contracts in logistics chains allows you to get rid of unnecessary intermediaries identify goods and their supply chains optimizing the logistics process due to the transparency of transactions and the immutability of data in the blockchain.

... With **CryptoDo** you can also:

- **Attract financing to the business through crowdfunding contracts**
- **Launch NFT collections for brands and bloggers on different blockchains**
- **Launch multifunctional tokens (loyalty programs, identification systems, internal currency of the company, etc)**
- **Create a DAO for collective financial management**
- **Deploy smart contracts for the gamification of your business**

Our goal is to create a drag and drop constructor for launching unique web3 solutions for any business processes

CryptoDo Monetization models

Fixed cost for creating modular solutions

CryptoDo users pay fixed amounts from \$100 to \$5000 for smart contract deployment in Mainnet

Turnover commission in each contract

Some types of contracts in CryptoDo can be issued for free but with a fixed commission set in favor of CryptoDo at the smart contract level

CryptoDo aggregates web3 and web 2 projects on the same platform and provide services for creating custom solutions on smart contracts for a fixed price / commission from sales on tokensales

Usually the successful use of blockchain in business requires the creation of a bunch of custom smart contracts. Therefore after creating the first contract users will return to us for new services

CryptoDo's Competitors

Similar services

There are other smart contract constructors, but none of them seems to combine a quality product with high sales efficiency

Constructors DAO

DAO constructors have been on the market for a long time and have a large capitalization. But CryptoDo offers both DAO functionality and other types of blockchain solutions for business

Outsourcing development studios

The main way to enter the web3 business is development outsourcing. Thus, the main competitors of CryptoDo are blockchain outsourcing companies and individual developers.

Market

CryptoDo operates in a large and fast-growing web3 technology market. We create solutions for integrating blockchain technologies into real business. There is a high demand in the market, but there are currently a lack of good solutions. Large Corporations are already implementing blockchain solutions in business processes, thereby creating a trend in the use of web3 for small and medium-sized businesses.

According to CB Insights by 2023, business costs for blockchain solutions will exceed \$16 billion while in 2018 these costs amounted to \$1.5 billion.

Companies that already use blockchain:

CryptoDo Tokenomics

Blockchain: BSC
Name: CryptoDo
Symbol: CDO
Decimals: 8
Total supply: 100 000 000

Stage	%	CDO price	Funds Raising	CDO Amount	Market cap
Pre-seed	4	\$0,05	\$200 000,00	4 000 000,00	\$5 000 000,00
Seed	5	\$0,10	\$500 000,00	5 000 000,00	\$10 000 000,00
Private	9	\$0,20	\$1 800 000,00	9 000 000,00	\$20 000 000,00
Public	4	\$0,60	\$2 400 000,00	4 000 000,00	\$60 000 000,00

Initial allocation of CDO tokens

5 year circulation of CDO tokens

CryptoDo Tokenomics

The **CDO** is the basic token of the **CryptoDo** project.

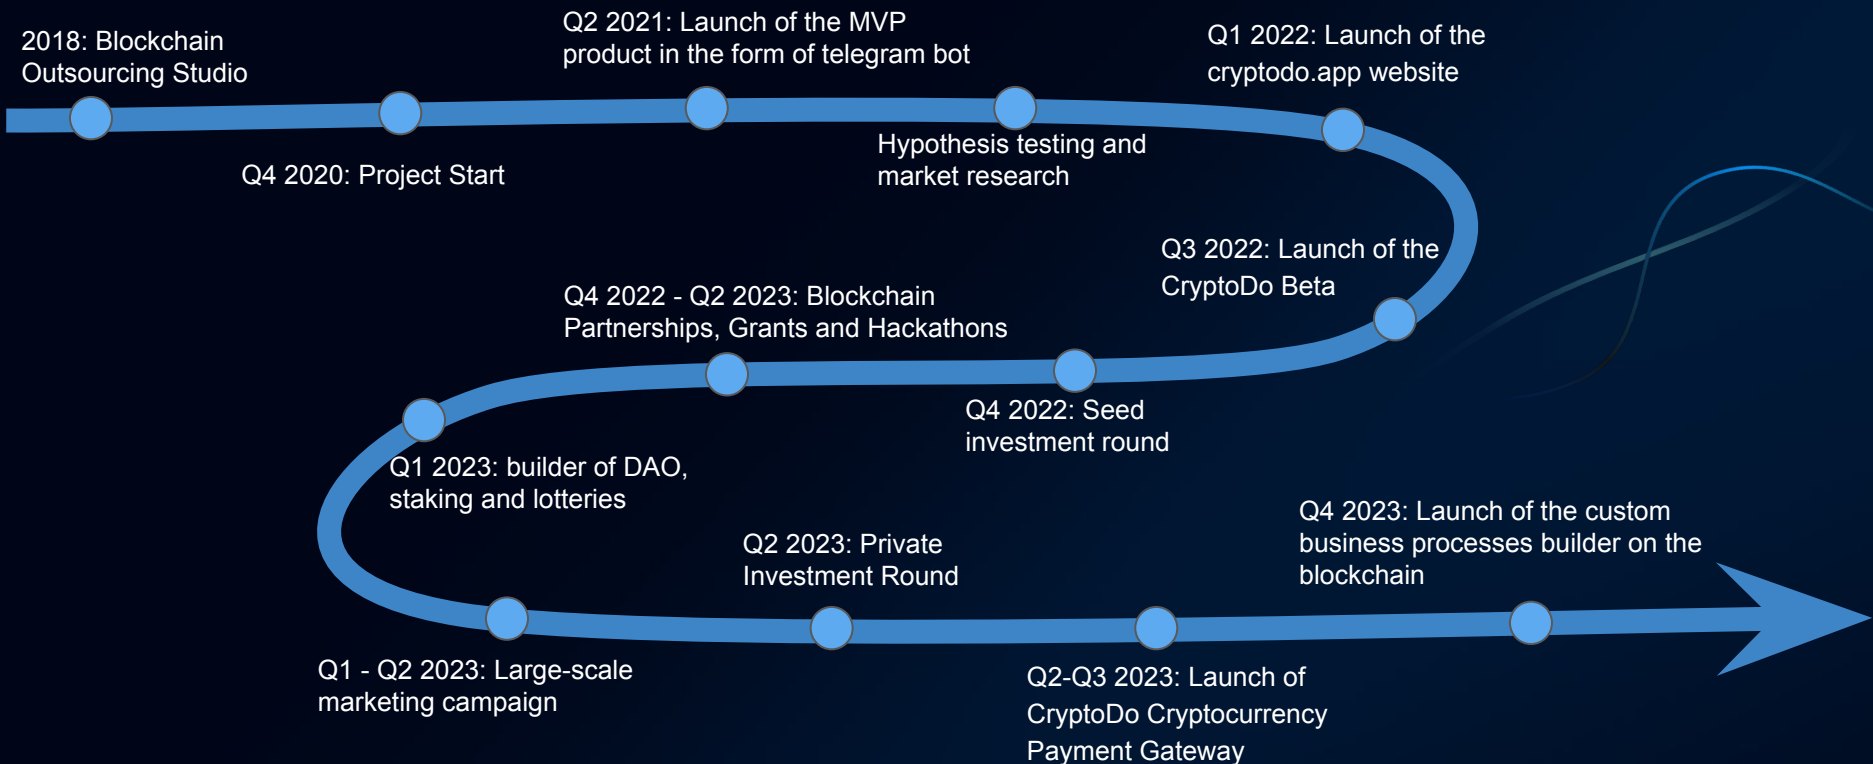

CDO is accepted as payment for all services for the creation of smart contracts in the CryptoDo service. The demand for token is thus on the raising and this leads to an increase in its exchange value.

All CDO tokens received as payment are burned and completely withdrawn from circulation. So ,there is a constant reduction of the available emissions.This makes the CDO token a deflationary asset. Part of the company's revenue goes to profit-sharing pools (staking) and is distributed among token holders.

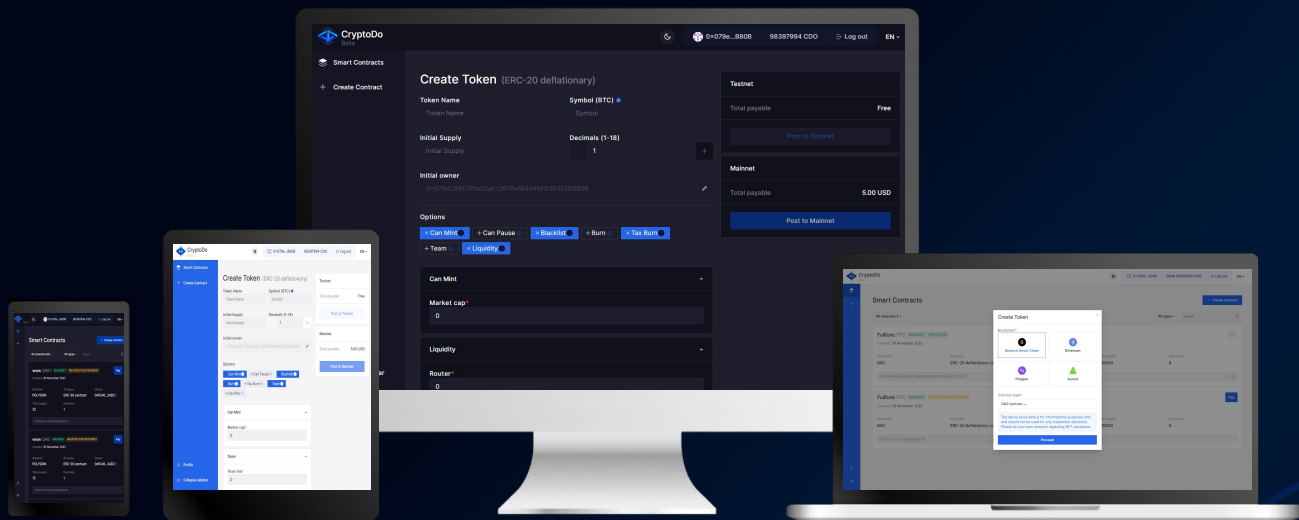

Also all CDO holders will have the right to vote to participate in project management. Thus CryptoDo will be managed in the DAO (decentralized Autonomous organization) format.
