

How does CCG help reduce licensed dispensary costs?

The only cost accrual for licensed cannabis businesses in a very minimal sense is a base hourly fee paid in invoice to our company for in-house developer works of setting up and deploying a dispensaries ledgering contracts and UX/UI dashboard, token gated to their own in house dispensary gene token and growth xp utility token. After these works have been completed, a scheduled in-house walkthrough at the site location of operation will take place for walkthrough of growth managers to work with and learn easily this ledgering product. Otherwise again this is free to use and open-source, meaning that businesses can have their own in house developer or tech service provider easily learn to work with and manage this system, as well as expands knowledge of the utility of the Tron Blockchain and smart contracts. For expanded or replacement contracts for a new growth batch once the prior batch has completed, this is a small base fee paid to DEX Exchange Inc if need be for deployment and owner transfer of new contracts which typically takes 1-2 hours of contractual work for completion.

This saves money on annual cost premiums for current seed to sale tracking softwares that carry upfront cost payments, monthly/annual license fees etc.
