DreamVerser

Project Info

DreamVerser is a responsive platform consisting of description, NFT drawing, digital museum and form sections. DreamVerser aims to enable TRON users to draw their dreams by hand or create them with free external platforms and to turn these dream NFTs into a diary and display them in a virtual museum. Users are free to keep and share not only their dreams but also goals, happy & sad memories, sweet relationships, funny memes & jokes, in short, anything they could think of as a diary.

Test Instructions

- 1) Read the details on the main page and start your journey
 - 2) Go to the Museum page, wander around, and check users' posts
 - 3) Create an image of your dream on the NFT page as you wish
 - 4) When you are satisfied with your NFT and want to share it with others, go to the form page
 - 5) Allow the Metamask wallet on BTTC to be connected automatically and submit the form to convey NFT
 - 6) After submitting the form to the virtual museum for storage in the exhibition, verify that your work is displayed in the virtual exhibition in 2 days

Share a Dream

Our Goal: All people have one thing in common. Dreaming... This project aims to enable TRON users to draw their dreams by hand or create them with artificial intelligence and to turn these dream NFTs into a diary and display them in a virtual museum.

Project Info: The project started with a responsive website with a simple interface. There are three different sections on the site:

- Main page contains the same explanations about the project you read here
- Dream NFT pages that offer the opportunity to draw by hand or with AI so that you can turn your dreams into NFT
- Museum page created to share your dream and to display it in the virtual museum

Project Test Instructions:

1. Create an image of your dream on the NFT page as you wish
2. Go to the Museum page and allow the Tronlink wallet to be connected automatically
3. If you are satisfied with your NFT, submit it via the form on the Museum page
4. Complete the form to convey NFT to the virtual museum for storage in the exhibition, which costs 10 TRX, and verify that your work is displayed in the virtual exhibition

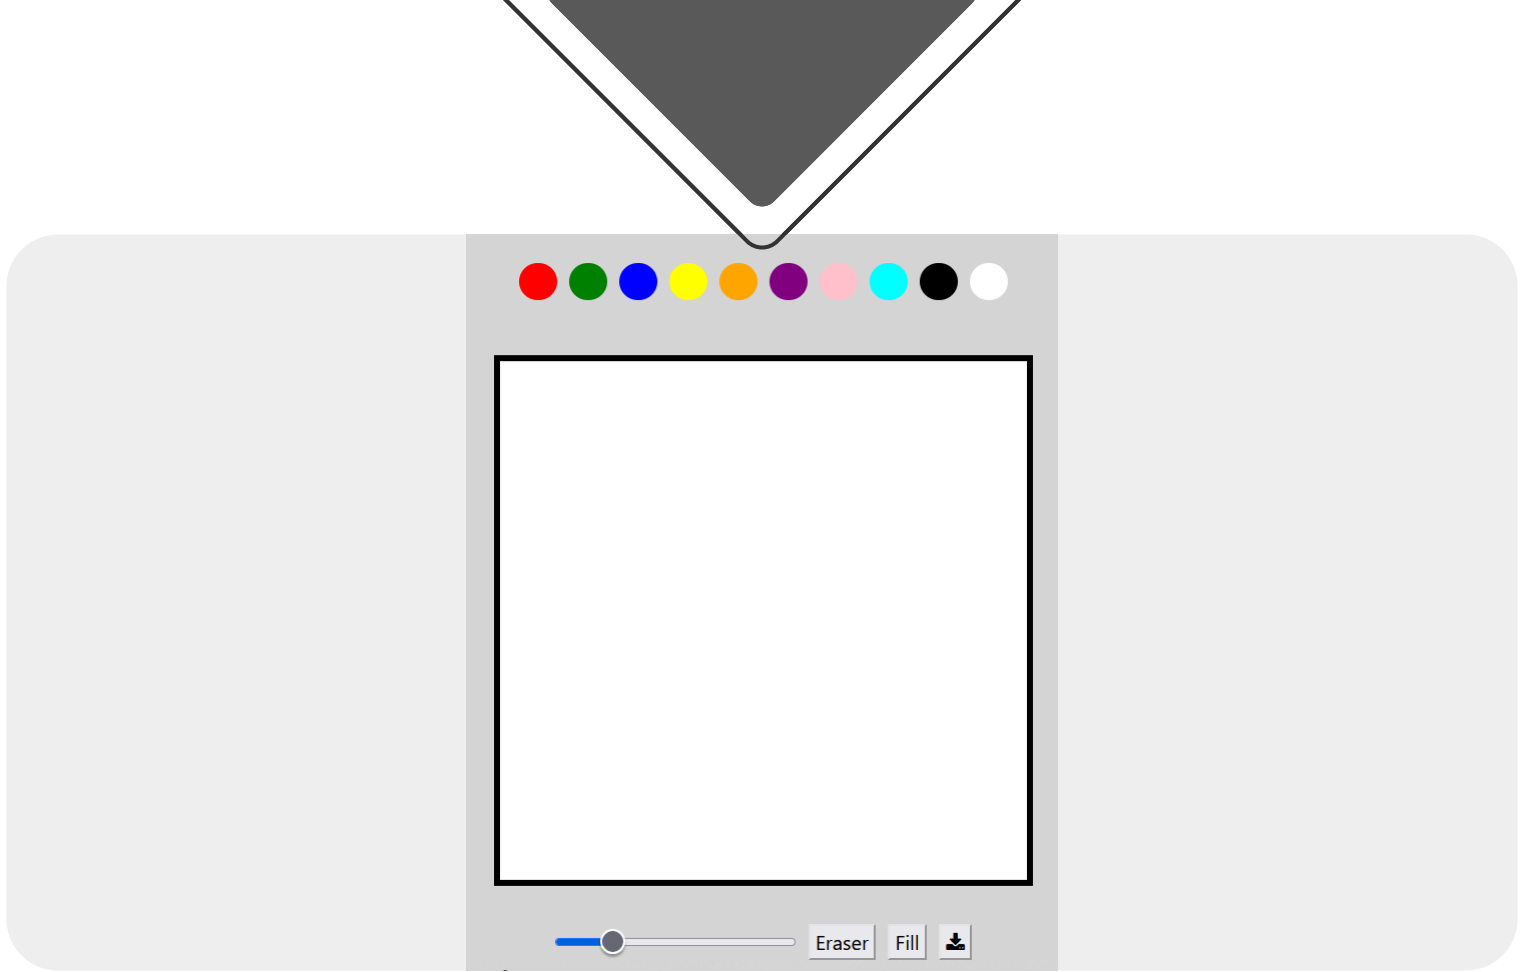

Project Details: This project allows users to express their creativity through dreams. Users can draw or describe their dreams in writing. The artificial intelligence algorithm will automatically draw the described dream and present it to the user. Users can evaluate the results, and if they like it, they can send the NFT through the form on-site. At the time of sending, payment is made through the TRX wallet, taking advantage of the TRON blockchain. The works will be exhibited in a virtual museum environment, and the audience will be able to tour these works.

Programming & Software Languages and Platforms Used:

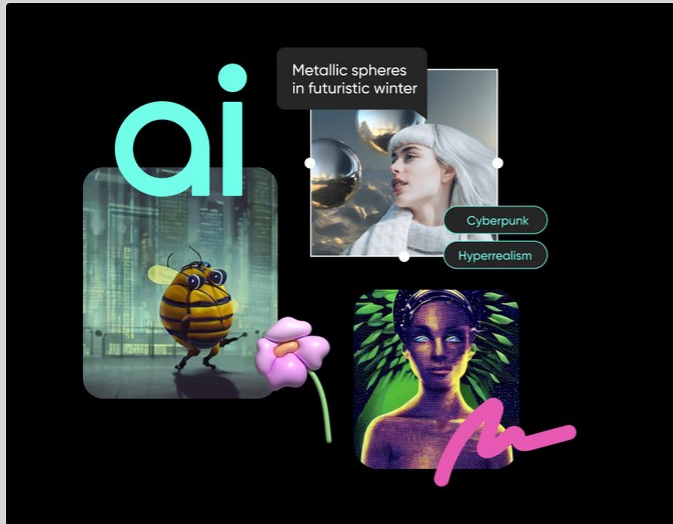

HTML5, CSS3, JS, OpenAI APIs, PHP, Node.js

Milestones:

1. Development of platform infrastructure
2. Creation of the interface for users to draw dream artifacts

w/ Freepik AI

w/ Picsart AI

w/ Hotpot.ai

We will share the artificial intelligence that we are developing with the OpenAI API when our budget is settled
(For now, we've temporarily added links to other free AIs to help you make your dreams NFT)

Terms & Conditions

- By submitting this form, you agree that the NFT you uploaded via [Imgur](#) will be exhibited in our virtual museum with your tron forum username and your dream story.
- The museum aims to maintain a peaceful atmosphere by discouraging aggressive, hateful, trolling, spammy, harassing, misleading, disruptive, explicit, extremist, derogatory, threatening images.
- [Imgur](#) will be used to keep our system safe and to check the pictures we have listed above. In the future, it will be possible to start uploading images directly to the form.
- We strongly recommend that you visit the [TRON DAO Forum](#) and contact us for your views and feedback.

and as a last, have a nice trip in our museum :)
