

Introduction

CCG DAPP

- **The licensed cannabis industry does not have a ledgering system for tracking and remaining compliant to laws and regulations via blockchain technology.**
- **Many blockchains carry high gas fees and or are not secure or competent for industrial use of ledgering many tx's onchain.**
- **The Tron Blockchain with its great innovation of TPS speed, free transactions through bandwidth and energy is a great success of blockchain utility and efficiency which inspired and enabled Crypto Cannabis Grow (CCG) dapp to become a reality for use case with next to no transactional fees.**

What Crypto Cannabis Does:

Crypto Cannabis Grow Dapp tracks and ledgers dynamic growth of licensed real cannabis on to the Tron Blockchain. Each real plant being grown is ledgered via a digital one with a smart contract logic system in place to read and determine the time of growth. When growth cycles complete the CCG DApp tracks and batches plants ready for harvest apart from plants still in growth cycle. A great win for the dispensaries is to save on costs with the current seed to sale ledger systems in place that carry annual licensing costs. With Crypto Cannabis Grow, the dapp is free of monthly or annual base fee costs standard for current seed to sale tracking products. Being free for all dispensaries to utility is enabled via the ability to freeze TRX for added energy for free contract trigger costs instead of costing Tron TRX directly. Also freezing TRX for bandwidth towards free transactions among licensed dispensaries and also receiving Tron block rewards for voting for network delegates with frozen Tron is a great incentive for businesses. So not only is CCG ledgering system product also free, but can help accrue new TRX rewards to the dispensaries wallets all with free/very low cost transactions.
